

ESTIMATING SQUARE ROOTS

ANSWERS

THE **SQUARE ROOT** OF A NUMBER IS THE SQUARE YOU MULTIPLIED TO GET THE NUMBER. A RADICAL SIGN, $\sqrt{\quad}$, IS USED TO SHOW THE POSITIVE SQUARE ROOT OF A NUMBER.

Helpful Examples

$\sqrt{25} = 5$	$\sqrt{484} = 22$	$\sqrt{0.49} = 0.7$	$\sqrt{2.25} = 1.5$
$5 \times 5 = 25$	$22 \times 22 = 484$	$0.7 \times 0.7 = 0.49$	$1.5 \times 1.5 = 2.25$

25, 484, 0.49, AND 2.25 ARE ALL PERFECT SQUARES BECAUSE THEY ARE THE SQUARES OF RATIONAL NUMBERS. **YOU CAN CLEARLY SEE THE ANSWER.**

BUT MOST OF THE TIME SQUARE ROOTS ARE NOT RATIONAL NUMBERS AND THE SQUARES ARE NOT PERFECT SQUARES. **YOU WILL HAVE TO ESTIMATE THE ANSWER.**

Helpful Example

$\sqrt{27}$ is not a perfect square. The answer will have to be an estimate.

$\sqrt{27}$ is between $\sqrt{25}$ and $\sqrt{36}$

$5 \times 5 = 25$	$6 \times 6 = 36$
-------------------	-------------------

$\sqrt{27}$ is between 5 and 6, but is closer to 5.

You can estimate it to a whole number of 5.

$\sqrt{27}$ is about 5

THE GOAL IS TO FIND THE TWO PERFECT SQUARES 27 IS BETWEEN, WHICH IS 25 AND 36. THEN FIGURE OUT WHICH ONE IT IS CLOSER TO. $27 - 25 = 2$ AND $36 - 27 = 9$, SO IT IS CLOSER TO 25. THE SQUARE ROOT OF 25 IS 5.

Now your turn. Estimate the square roots to the nearest whole number.

a. $\sqrt{130}$ $11 \times 11 = 121$ $12 \times 12 = 144$ \Rightarrow $130 - 121 = 9$ \Rightarrow $144 - 130 = 14$ \Rightarrow 130 is closer to 121

130

$\sqrt{130}$ is about 11

- | | | | |
|------------------------------------|-------------------------------------|------------------------------------|-------------------------------------|
| 1. $\sqrt{55}$
about 7 | 2. $\sqrt{113}$
about 11 | 3. $\sqrt{40.5}$
about 6 | 4. $\sqrt{92}$
about 10 |
| 5. $\sqrt{152}$
about 12 | 6. $\sqrt{219}$
about 15 | 7. $\sqrt{6.2}$
about 2 | 8. $\sqrt{131}$
about 11 |
| 9. $\sqrt{70.4}$
about 8 | 10. $\sqrt{425}$
about 21 | 11. $\sqrt{46}$
about 7 | 12. $\sqrt{21.7}$
about 5 |
