

Two- Step Equations

Describe what steps you would take to solve the equations

1) $\frac{n}{3} - 6 = 15$

First i would _____

Then i would _____

2) $55 = 35 + \frac{q}{5}$

First i would _____

Then i would _____

Solve the equations

3) $7q + 50 = 2q$

6) $64 - 3n = -32$

9) $\frac{d}{8} - 6 = 6$

4) $3p = 75 + 18p$

7) $4c = -32c + 22c$

10) $62 = 22 + \frac{s}{4}$

5) $60 - 9n = 186$

8) $100 + 10x = 200$

11) $32 - \frac{r}{5} = 137$
